

Kidney Transplant Studies - As of April 2008

A Randomized, Open-Label, Multicenter, Parallel-Group Study of Belatacept-Based Corticosteroid-Free Regimens in Renal Transplant (BMS Bleatacept)

A phase IV, non-interventional, multi-center, open-label, prospective, observational study of the safety, effectiveness, tolerability and compliance of immunosuppressive regimens using mycophenolic acid to treat de novo renal transplant patients in routine clinical practice (MORE)

Genomics for Kidney Transplantation (Scripps)

Disclaimer

The information provided here is for general use only. The final determination of eligibility to participate in any clinical trial requires that the principal investigator or his/her designate make a very patient-specific, case-by-case assessment of multiple criteria that are too numerous to list here. Additional information may be obtained from the contact person listed for the specific trial or by calling 210-575-4238.
